Critical Calibration Observation:
• Raw Model: Brier = 0.0004 | ECE = 0.0199
• Platt Calibrated: Brier = 0.1196 | ECE = 0.3458
Platt scaling significantly worsened calibration!
Because N=8 test predictions were separated at extremes
(0.02 and 0.98), logistic calibration shrunk probabilities
inward to ~0.35 and ~0.65, inflating probability error.
